RURAL PRODUCTION

SOUTH AUSTRALIA

YEAR ENDED 31ST MARCH 1964

SCOPE This bulletin summarizes detailed information published in the Bulletins "Livestock, 31st March 1964" and "Cereals, Season 1963-64" recently issued from this Bureau, and shows in addition particulars concerning areas and yields of other crops, rural employment, use of artificial fertilizers, machinery on rural holdings, and direct overseas exports of rural produce. It also lists some South Australian records associated with rural production.

AREA AND UTILIZATION OF HOLDINGS The total area of holdings increased during 1963-64 to 158,905,000 acres. The area of 12,068,000 acres under cultivation (crops, sown pastures, and fallow) was 620,000 acres more than the previous highest of 11,448,000 acres in 1962-63. The total area of crops increased from 4,932,000 acres in 1962-63 to 5,380,000 acres, the increase being mainly in the areas devoted to growing grain, hay, and forage.

The area of 4,457,000 acres of cereals for grain during the 1963-64 season was the largest area since 4,556,000 acres were sown in 1932-33. The area of wheat for grain in 1963-64 was almost double the area sown in 1958-59 and the greatest since 1938-39.

The area of sown pasture from 1920 to 1950 increased steadily from 20,000 to 1,066,000 acres but has since increased very rapidly. In 1963-64 the area of sown pasture was a record 5,574,000 acres.

 (c) Excludes payments for construction or development work.

ARTIFICIAL
FERTILIZERS
USED

The increases in the area under crop and the area of sown pastures in 1963-64 were matched by corresponding changes in areas fertilized (see Table 4). Of the 227,000 tons of superphosphate used on crops 18,000 tons contained trace elements while 38,000 tons with trace elements were included in the 225,000 tons used on pastures. There has been very little change in recent years in the proportion of area under crop fertilized and in the quantity of fertilizer per acre applied to crops and pasture.

AREA AND
YIELD OF
CROPS

Tables 5, 6, 7, and 8, show details of areas and yields of the principal crops grown in South Australia during 1963-64 compared with similar details for previous years.

The 1963-64 wheat harvest of 54 million bushels was a record in South Australia. The previous highest yield of wheat was 48.1 million bushels in 1931-32. Particulars of the cereal harvest are given in greater detail in the Bulletin "Cereals, Season 1963-64".

BEEKEEPING

The production of honey and beeswax fluctuates considerably from year to year, depending upon seasonal conditions. The average yield of honey per productive hive increased from 81.3 lb. in 1962-63 to 154 lb. in 1963-64, and the 9,721,492 lb. of honey produced was the highest annual production since 1948-49 when the record of 10,906,372 lb. was obtained.

LIVESTOCK The following table shows details of numbers of and production from livestock. To 1963 cattle were classified under the headings Dairy cattle and Beef cattle but in 1964 they were classified as "Used for the production of milk" or "Used mainly for meat production". Because of the different method of classification used in 1964, the figures (except for total cattle) should not be compared directly with those in previous years.
